

Helen Sawyer Hogg Public Lecture | CASCA

Cosmic Fossils and the Origins of Planets

Dr. JJ Kavelaars, Herzberg Astronomy and Astrophysics
Research Centre, NRC

Tuesday June 7, 2025

7pm | McNally Auditorium, Saint Mary's University

What can asteroids, Kuiper Belt objects, and interstellar visitors tell us about how planets form? These distant and ancient bodies hold the key to understanding the early history of our solar system. Join Dr. JJ Kavelaars as he explores how new discoveries—and the upcoming Vera C. Rubin Observatory—are transforming our view of the origins of planetary systems.
